Portfolio: [AhmedHassan-Portfolio](#)

Summary

- Embedded System Engineer with over 5 years of experience in programming, microcontroller interfacing and dealing with electronics and sensors (During this period, I worked on more than 45 projects).
- Technical Manager & Team Lead with 5+ years of experience in engineering and leadership. Managed 150+ employees at Space G7, launched multiple technical tracks, and trained 200+ developers.
- Background in AI Automation – able to lead teams while staying technically hands-on.

Experience

Nov 2025 – Present	AI Automation Engineer - Built and deployed AI agents for 3+ client projects including customer service automation and AI videos. - Designed n8n workflows that reduced manual operations time by 30 hours/week - Integrated LLMs into production pipelines serving real business clients
Oct 2024 – Present	Space G7 Project Manager - Led a team of 150+ employees across technical and operational departments - Launched 3 new programming tracks, expanding course offerings by 60% - Designed and built the company website (spaceg7.com) from scratch - Promoted from Instructor to Manager within 6 months based on performance
Jun 2024 – Oct 2024	Programming Instructor (At Space G7 Company) - Delivered Python and C++ courses to 200+ students - Maintained 98% student satisfaction / completion rate - Developed hands-on curriculum focused on real-world projects
Feb 2024 – Jun 2024	Freelancer in the field of AI Training - I worked as a prompt engineer in the field of artificial intelligence training for an international company, designing and optimizing prompts to improve AI model performance and enhance user interactions.
Oct 2023 – Jun 2024	Senior Project (Zagazig University) - Developed a Smart Pharmacy system utilizing embedded systems, a mobile application, and artificial intelligence to streamline medication management and enhance patient care.
Sep 2023 – Dec 2023	Google Development Student Club (GDSC) Core Team - After two months of intensive training, I became an instructor for students in the Embedded Systems track, guiding them through hands-on projects and fostering their technical skills.
Feb 2023 – Jul 2023	Worked as an instructor in Under Control Company (Embedded Systems) - After five months of training, I gained valuable experience as an instructor, teaching students the fundamentals of embedded systems and guiding them through practical applications.

Feb 2022 – Jun 2022	Junior Projects (Zagazig University) - Developed a project focused on the rationalization of energy consumption using IOT and AI. - Created an elevator system utilizing logic gates and timers to enhance operational efficiency.
Jul 2020 – Oct 2021	Worked in an electronics workshop (For 15 months) - Gained hands-on experience in an electronics workshop, where I learned to work with complex electrical circuits and electronic components, enhancing my technical skills and problem-solving abilities.

Education

Zagazig University — B.Sc. Computer & Systems Engineering

Graduated 2024 | Grade: Very Good

Graduation Project: Smart Pharmacy System

(Embedded Systems + Mobile App + AI)

Technical Skills

Programming	- C Language (Advanced) - Python (Proficient) - Java (Intermediate)
Microcontroller	- Arduino includes the integration and control of sensors, actuators and modules. - ATmega32 interfacing with Standard drivers and communication protocols. - ARM Cortex-M interfacing with Standard drivers and communication protocols.
Hardware	- Skilled in working with motors, electronics, and sensors, ensuring proper implementation and functionality based on their respective data sheets.
AI Automation	- Designed and deployed AI-automated workflows using n8n to streamline data processing and integrate large language models (LLMs) as part of my technical development role.
Web Development	- Designed and developed the company website " spaceg7.com" as part of my technical management role.

Familiar With

ROS with Linux	- How to simplify the development process, promote code reuse and enable rapid prototyping in robots.		
3D Printing	- How to design, modify and print 3D models with standards.		
Simulation	- Proteus	- Fritzing	- MATLAB

Certifications

1. NTI – Artificial Intelligence & Information Security
2. Coursera (UC Irvine) – IoT and Embedded Systems
3. Coursera (EU) – Embedded Hardware & Operating Systems
4. Udemy – AUTOSAR and RTOS
5. Udemy – Embedded Systems with AVR
6. One Million Prompters – Dubai AI Initiative

- 7. GDSC – Embedded Systems Core Team
- 8. Edraak – C Programming Language and Arduino

Internships

- AVR Diploma at IMT School (C, Interfacing, Communication Protocols and RTOS)
- ARM Diploma at IMT School (C, Interfacing, Real Time and Communications)
- NTI Summer Training in Artificial Intelligence (AI) and Information Security for 120 hours.
- Google Development Student Club (GDSC) Training in Embedded Systems for 2 months
- Digital Egypt Pioneers Initiative (DEPI) in track React Web Developer for 6 months

Language Proficiency

- Arabic – Native
- English – Professional Working Proficiency (B2/C1)
